

### **Stop no.6 - Stream**

Local stream called „Oborsky“ divides the whole area also from the geological point of view. On the left bank we can meet with rocks Crystalline complex of Bohemian and Moravian Highlands and on the right bank of the river there are sandstone and marlstone of Bohemian Cretaceous Basin). You can find diverse flora on the both banks. Limestone is concentrated on the right side and mountain species on the left side. It concerns marsh marigold, Comfrey, wood horsetail, mezereon, common wood sorrel, etc.
